

Asanté GigaNIC 32/64 bit PCI Gigabit Ethernet Adapter

Read Me First

February 1999

Asanté now provides support for the MacOS in a Gigabit Environment (8.1 Minimum - 8.5 preferred). When using the Asanté GigaNIC PCI Ethernet Adapter with Apple Computer's Appleshare IP file server software - please use version 6.1. There is a significant improvement in TCP/IP performance as opposed to Appleshare IP 6.0. Asanté Technologies has tuned the Mac OS driver to work best with Appleshare IP 6.1. Further, it is not recommended to use personal file sharing or peer-to-peer file sharing (AppleTalk) with the Asanté GigaNIC PCI Gigabit Ethernet adapter. This configuration will work, however, performance will not be as fast as TCP/IP.

****When plugged into a 32bit PCI slot the Asanté GigaNIC PCI Gigabit Ethernet Adapter gold connectors will extend beyond the 32bit PCI slot - this is normal and will not effect performance****

Included within this package should be:

- Asanté GigaNIC 32/64bit MacOS high performance driver diskette.
- Asanté GigaNIC MacOS Quick Start Guide.
- Asanté GigaNIC 32/64 bit PCI Gigabit Ethernet Adapter
- Packet Engines Installation Manual
- Packet Engines CD containing PCI drivers for Windows NT 4.0 & 5.0, Windows95/98, NetWare 3.12 & 4.11, and Solaris 2.51 & 2.6

Please note:

For Technical Support for MacOS contact:

Asanté Technologies, Inc
821 Fox Lane
San Jose, CA 95131 USA
